30th Annual International Trauma Conference: Neuroscience, Embodiment, and the Restoration of the Self
May 29th – June 1st

Target Audience:
Social Workers, Counselors, Psychologists, Physicians, Psychiatrists, Addiction Counselors, Marriage & Family Therapists, Occupational Therapists and Occupational Therapy Assistants, Nurses, and other Mental Health Professionals

Conference Description:

The study of trauma has probably been the single most fertile area in helping to develop a deeper understanding of the relationship among the emotional, cognitive, social and biological forces that shape human development. Starting with post-traumatic stress disorder (PTSD) in adults and expanding into early attachment and overwhelming attachment and social experiences in childhood (“Developmental Trauma”), this endeavor has elucidated how certain experiences can “set” psychological expectations, bodily experiences and biological selectivity.

When addressing the problems of traumatized people who, in a myriad of ways, continue to react to current experience as a replay of the past, there is a need for therapeutic methods that do not depend exclusively on drugs, talk or understanding. We have learned that most experience is automatically processed on a subcortical level of the brain; i.e., by “unconscious” interpretations that take place outside of conscious awareness. Insight and good intentions have only a limited influence on the operation of these subcortical processes, but synchrony, movement and reparative experiences do. This conference will present both basic research about the impact of trauma over the life cycle, and a range of effective interventions that are being practiced in clinics, schools, prisons, families, and communities around the world.

Wednesday, May 29th, 2019
Pre-Conference Institute – participants will choose one of the following full-day workshops:

Pre-Conference Workshop 1: The Use of Mind-Altering Substances- MDMA, Psilocybin, and Marijuana for Treating PTSD and Other Mental Distress

CE: YES

Presenters:
Michael Mithoefer, MD, Rick Doblin, PhD, William Richards, PhD, Daniel McQueen, Richard Schwartz, PhD, Bessel van der Kolk, MD, Jim Hopper, PhD, Anne St Goar, MD, Libby Call, PsyD, Susan Walker, MD, Francis Guerriero, MA, LICSW, & Michael Alpert, MD
Brochure # 71372

Description:
For the first time in over four decades, researchers are returning to examining the therapeutic benefits of mind altering substances, including MDMA (ecstasy), psilocybin (mushrooms), marijuana and LSD. In the 1970s the study of all psychedelics was criminalized in the US, despite emerging evidence of their medical value. Over the past decade, the Multidisciplinary Association for Psychedelic Research (MAPS) has helped to revive psychedelic research, sponsoring studies across the United States and around the world, including MDMA-assisted therapy for PTSD, and end-of-life anxiety. The results have been very positive, lasting over 72 months of follow-up, with few adverse effects. Psychedelics may promote a deepening and acceleration of the psychotherapeutic process. During therapy, people often are able to access and find peace with disavowed, “exiled” parts of themselves. In this workshop the founder of MAPS will describe the evolution of psychedelic therapy, the principal investigator of the Phase I and II level trials will discuss outcomes and processes, the PI of the Hopkins psilocybin study terminally ill patients and a marijuana researcher the promises and pitfalls for that substance. The Boston MDMA study team will discuss clinical experiences and applications. In appropriate therapeutic contexts, psychedelics may prove to be more effective than most conventional treatments, as well as safer and more cost-effective.

Outline:
8-8:30 AM Registration
8:30 AM Morning Program
History of MDMA
Patented in 2014
Use in psychotherapy before scheduling
Placed in Schedule 1 in 1985

15 Minute Morning Break
Pharmacology of MDMA
Monoamine effects
Hormonal effects
Effects on vital signs
Side effects

12:30—2 PM Lunch (on your own)
2 PM Afternoon Program
Controlled Clinical Trials since Scheduling
Phase 1 trials
Phase 2 trials 2004 – 2016 – design and results
FDA Breakthrough Therapy designation 2017
Ongoing Phase 3 trials – design and locations
Risk Evaluation and Mitigation strategy

15 Minute Afternoon Break
Therapeutic Method used in Clinical Trials
Manualized method
Nature of the research sessions
Illustrative quotes from study participants
Possible mechanism of therapeutic effect
Video clip to illustrate the therapeutic process

Questions/comments

5:15 PM Pre-Conference Workshop Ends
Objectives:
1. Identify how the emerging research of MDMA-assisted psychotherapy (MDMA-AP) can be an effective for clients who do not respond to traditional therapies for PTSD.
2. Distinguish how prolonged exposure (PE) therapy can be ineffective for some clients, and recognize how MDMA-AP decrease client dropout rates.
3. Summarize the mechanism of MDMA in the brain and how that relates to the treatment of trauma.
4. Examine the therapeutic benefits of psychedelic substances, including MDMA (ecstasy), psilocybin (mushrooms) and LSD.
5. Identify the positive effects on PTSD symptom severity by the end of the first treatment trial.
6. Discover how psychedelics may promote a deepening and acceleration of the psychotherapeutic process for clients.
7. Evaluate the research regarding phase I & II trials involving MDMA.
8. Evaluate the potential risks of MDMA-AP, including substance abuse and neurocognitive decline.

References:

Pre-Conference Workshop 2: Trauma-Informed Community Interventions: Working with Marginalized Groups in Global Settings

CE: YES

Presenters:
Wendy d’Andrea, Phd, Matt Mattila, Sarah Beranbaum, Vivian Khedari, Mike Niconchuk, Josefin Wikstrom, Licia Sky

Description:
This preconference workshop will cover the topic of incorporating embodied, trauma-informed practices into community settings from the perspective of three programs working with children and adults across five continents. The morning session will focus on using yoga to promote trauma recovery with incarcerated people; the afternoon session will demonstrate a trauma-informed sports program with youth in South Africa and a neuroscience-based storytelling and psychoeducational tool utilized in a Syrian refugee camp. All sessions will a) provide experiential demonstrations, b) examine the role that program staff play in developing culturally-embedded programs; and c) describe the outcomes data suggesting program impact.

Morning session:

Prison Yoga Project is a global initiative that supports incarcerated adults and youths, prison systems, forensic psychiatry units, trauma exposed communities and survivors of crime with programs to promote rehabilitation, reduce recidivism, and improve public safety. Central to our work are the concepts of restorative justice and social activism. PYP is an international project founded at San Quentin state prison USA by James Fox in 2002, with programs in over 350 US prisons. PYP also runs programs in Mexico, Norway, Sweden, Denmark, U.K., Netherlands and India.

In this interactive workshop Josefin will introduce the international project with practical experiential applications from Trauma-Informed Therapeutic yoga and dance/movement practices. The workshop will include the science and methodology behind her therapeutic programs from the recently published book “Yoga Therapy for Prisoners Mental Health”.

Published in Mexico 2019 created by Lusia Perez from the PYP Mexico, financed by the UN and the Mexican government. In addition, there will be a presentation of the national Swedish Krimyoga, an evidence- based program that has trained prison guards to become yoga teachers.

Afternoon Session:

The afternoon session will include two organizations: Waves for Change and Beyond Conflict. Waves for Change is a trauma-informed surf therapy program working with South African youth. By fusing the rush of surfing with evidence-based trauma-informed practices, W4C provides child-friendly mental health services to vulnerable and differently-abled youth living in under-resourced communities. Through access to safe spaces, caring mentors, and weekly surf therapy, W4C gives children skills to cope with stress, regulate behavior, build healthy relationships, and make positive life choices.

Beyond Conflict was created to apply behavioral and brain science to real world issues and to design and promote new tools that reduce conflict, increase tolerance, and facilitate positive social change. They have recently launched The Field Guide for Barefoot Psychologists, an educational and self-care tool written for individuals (18+) forcibly displaced, and for those working with them. It is intended most specifically for migrants and refugees who themselves may work in
Brochure # 71372

humanitarian and aid programs, and combines relatable story-telling with neuroscience-based, trauma-informed psychoeducation and self-care exercises.

Objectives:
1. Identify safe, effective, and practical strategies to develop an understanding of the neurobiological rationale behind the trauma informed prison yoga and movement as it relates to clinical practice.
2. Implement strategies from sports and movement practice to support emotional regulation and resilience into clients’ everyday life, clinical settings, and trauma exposed communal groups.
3. Investigate how our programs reduce the physical, mental, and emotional impacts and healthcare costs associated with stress and unresolved trauma to improve client level of functioning.
4. Explore how we work with developing client self-awareness, self-worth, empathy, and compassion that leads to positive personal and pro-social choices for symptom management.
5. Articulate what it means to foster a more peaceful and humane environment to inform clinical treatment interventions.
6. Evaluate the complexity of traumatic stress in confined environments as it relates to treatment outcomes.
7. Implement practices from mindfulness based trauma informed prison yoga, rhythm, and movement to support emotional regulation and resilience in clients.
8. Explain the global therapeutic potential from the PYP programs in correctional settings for purposes of client psychoeducation.

**Pre-Conference Workshop 3: Clinical Applications of the Polyvagal Theory**

**CE: YES**

**Presenters:**
Ana do Valle, OTR, SEP, Deb Dana, LCSW, Prahlad Galbiati, Benjamin Fry, Randall Redfield, & Karen Onderko
Description:
The polyvagal theory is part of our shared history of understanding that mental, behavioral and physical health problems can originate in the nervous system. Engagement with this theory has led clinicians to look at its clinical implications through the lens of autonomic regulation and dysregulation. Many clinicians are now seeking to work with and to understand how the organizing principles of neuroception, hierarchy, and co-regulation impact on and can be used in the treatment process. Polyvagal Theory suggests a role for physical stimulation and measurement as part of the clinical process. This workshop explores how to incorporate these scientific tools into more traditional talk-therapy protocols of practice.

Both the morning and afternoon session will present case studies, video and a live practical demonstration of the technology in simulated clinical practice. The morning session will present a relational multisensory model for utilizing the Safe and Sound Protocol (SSP) in clinical practice. The afternoon session will present the use of the PhysioCam to provide live measurement and feedback on autonomic state during clinical sessions.

Outline:
8:00—8:30 AM  Registration
8:30 AM  Morning Program
  Polyvagal Theory in Treatment
  Autonomic regulation
  Neuroception
  Hierarchy
  Co-regulation
15 Minute Morning Break
  Case Studies
  Live Demonstration
12:30—2 PM  Lunch (on your own)
2 PM  Afternoon Program
  Safe and Sound Protocol (SSP)
    PhysioCam
    Physical stimulation
  Measurement
  The use of technology in clinical work
    Evolution of technology to track autonomic state via non-contact facial measurement
    What is being monitored
    Interpreting the data
15 Minute Afternoon Break
  Variables in application
    Benefits of real time measurement
    Benefits of post session review
    Tracking individual client state changes
    Impact to the therapeutic relationship of simultaneous tracking of client and clinician reciprocal state changes
  Case Studies
  Live Demonstration
  Questions/comments
5:15 PM  Pre-Conference Workshop Ends
Objectives:

1. Articulate the implications of tracking autonomic state during clinical sessions via the use of technology with a variety of client populations.
2. Consider the therapeutic benefits and challenges of in-session and/or post-session autonomic feedback via technology.
3. Evaluate the impact of simultaneous client and clinician autonomic feedback via technology to the therapeutic relationship.
4. Identify portals of intervention in the autonomic nervous system to more effectively establish safety and treat trauma.
5. Analyze how the autonomic nervous system operates as an internal surveillance system and its impact on clients’ habitual responses to trauma.
6. Summarize the SEGAN, a relational trauma-informed model for integrating the Safe and Sound Protocol in clinical practice.
7. Discover the right degree of neural challenge and exercises to employ with clients to help shape the autonomic nervous system toward safety and connection.
8. Evaluate the basis of the Polyvagal Theory as applied in a clinical setting.

Cracked Up
Michelle Esrick

Discussants: Bessel van der Kolk, MD & Michelle Esrick

In Cracked Up we witness the impact adverse childhood experiences can have across a lifetime through the incredible story of actor, comedian, master impressionist and Saturday Night Live veteran, Darrell Hammond. Behind the scenes Darrell suffered from debilitating flashbacks, self-injury, addiction and misdiagnosis, until the right doctor isolated the key to unlocking the memories his brain kept locked away for over 50 years. Cracked Up creates an inspiring balance between comedy and tragedy helping us understand the effects of childhood trauma in a new light, breaking down barriers of stigma and replacing shame with compassion and hope. www.CrackedUpMovie.com

Thursday, May 31st, 2018

Pre-Conference Institute – participants will choose one of the following full-day workshops:

Pre-Conference Workshop 4: From Embodied to Symbolic: Exploring Innovative Child Trauma Approaches to Physical Balance, Mutual Attunement, Self-Regulation, & Attachment-Building

CE: YES

Presenters:
SMART team: Elizabeth Warner, PsyD, Alexandra Cook, PhD, Anne Westcott, LICSW, & Heather Finn, LICSW; Theraplay® team: Dafna Lender, LCSW & Phyllis Booth, MA; PPIP team: Beatrice Beebe, PhD; & Ruth Lanius, MD, PhD
Description:
Disrupted bodily regulation and attachment processes in traumatized children present profound clinical challenges. Through video case presentation and presenter discussion, we will examine three innovative treatments targeting somatic regulation and attachment building without reliance on symbolic language. By comparing Sensory Motor Arousal Regulation Treatment, Psychoanalytic Psychotherapy with Infants & Parents, and Theraplay®, each a bottom-up, embodied and developmentally grounded approach, we will explore the mechanisms of growth, the interventions that seem to promote regulation and increase attachment actions, and consider the neurobiological underpinnings of these processes.

Outline:
8-8:30 AM  Registration
8:30 AM  Morning Program
Child Trauma Interventions
   Somatic regulation
   Attachment building

15 Minute Morning Break
Video case presentations
Discussion
12:30—2 PM  Lunch (on your own)
2 PM  Afternoon Program
Sensory Motor Arousal Regulation Treatment
   Mechanisms of growth
   Interventions to promote regulation and increase attachment
   Neurobiological underpinnings
Psychoanalytic Psychotherapy with Infants & Parents
   Mechanisms of growth
   Interventions to promote regulation and increase attachment
   Neurobiological underpinnings

15 Minute Afternoon Break
Theraplay® model
   Theraplay® treatment through an attachment lens
   Theraplay® treatment through a Polyvagal lens
Theraplay® Assessment
   Intake interview including caregiver’s attachment history
   Direct observation of caregiver-child interaction and arousal states via the Marschak Interaction Method (MIM)
   Reflection on interactions with the caregiver
   Reflective practice of socially engaged arousal regulating activities with the caregiver
Theraplay® Treatment
   Participation of caregiver in session activities and separate reflective discussion sessions
   Therapist provision of facial, vocal & gestural safety cues
   Activation of caregiver’s and child’s social engagement systems
   Sequenced guided participation in up-regulating activities of reciprocal play and down-regulating rest and digest activities
   Responding to client dysregulation with attention, acceptance, empathy and repair
   Internal or external stressors of client
   Noncongruence with the child/parent previous experience of self and others
Too rapid attempt to work at the boundary of affective tolerance (video)
Positive messages the Theraplay® process conveys to the caregiver and child
Questions/comments

5:15 PM  Pre-Conference Workshop Ends

Objectives:
1. Articulate a basic explanation why embodied treatment approaches would be considered when treating developmental trauma in child clients.
2. Identify two benefits gained by utilizing microanalysis of film to expand clinical understanding as it relates to case conceptualization.
4. Evaluate one interactional trauma pattern discernable in the infant-mother dyad and put to practical use in session.
5. Distinguish two observable indicators of the process of somatic regulation in a child as related to clinical treatment.
6. Explain how embodied, non-verbal communication of traumatic material differs from symbolic forms in clients.
7. Examine three dyadic tools one can incorporate during child trauma treatment to support return to a regulated state for symptom management.
8. Compare and contrast Sensory Motor Arousal Regulation Treatment, Psychoanalytic Psychotherapy with Infants & Parents, and Theraplay® to inform the clinician’s choice of treatment interventions.

Pre-Conference Workshop 5: A Comprehensive Approach to Neurofeedback for Trauma Related Dysregulation: Integration with Therapeutic Attunement, Biofeedback & Other Body/Mind Approaches

CE: YES

Presenters:
Ainat Rogel, PhD, Diana Martinez, MD, PhD, Sebern Fisher, MA, BCN, Elya Steinberg, MD, & Inna Khazan, PhD
Brochure # 71372

Description:
Understanding that trauma alters and dysregulates brain activity opens new state of the art methods of treatment which directly target disturbed neuronal pathways. One such treatment, Neurofeedback, leverages recent research results that relate neuronal pathways and brain areas affected by the trauma with executive functioning, safety, sense of self, different self-states, bodily based aspects (e.g. physical balance, movement, voice modulation, interoceptive sensations) shame and agency.

This experiential workshop brings together researchers, clinicians and neurofeedback practitioners who are exploring ways in which we can apply the neuroscience of trauma to clinical practice by integrating it with psychotherapy, biofeedback, bodywork and mindfulness. The workshop will start with an explanation of the basics of neurofeedback and review the existing research with practical implications. Next, the impact of neurofeedback on Developmental Trauma by calming down the fear-driven brain and improving emotion regulation. The major part of the workshop will be dedicated to integrating neurofeedback into clinical settings, that will include hands-on experience.

Outline:
8-8:30 AM Registration
8:30 AM Morning Program
   Impacts of trauma and neglect on the developing brain
   Review of latest research

15 Minute Morning Break

Overview of the use of neurofeedback for affect-regulation
   Brief discussion of affect regulation as the core problem in developmental trauma
   Brief overview of the connection between affect regulation and dissociation
   Impact of quieting fear on dissociative states

12:30—2 PM Lunch (on your own)
2 PM Afternoon Program
   Developmental Trauma
   Fear-driven brain
   Improve emotion regulation
   Integrate Neurofeedback into Clinical Settings
   Non-invasive office-based electrophysiology
   Specific neuro networks associated with trauma

15 Minute Afternoon Break

Does neuroscience change everything?
   A discussion of the impact of neuroscience science findings and neurofeedback outcomes on therapy with those suffering dissociative disorders
   Discussion panel with the experts
   Conclusion/review/questions
   Questions/comments

5:15 PM Pre-Conference Workshop Ends

Objectives:
1. Summarize the recent developments in neuroscience as they relate to the treatment of dissociation.
2. Articulate the importance of addressing neurocircuitry with neurofeedback in the treatment of dissociation in clients.
3. Identify the principles of neurofeedback and its applications to developmental trauma (DT) and put to practical use in session.
4. Explain the concept of heart rate variability biofeedback and its applications to developmental trauma as it relates to clinical practice.
5. Evaluate specific heart rate variability biofeedback skills and discuss ways to utilize them in clinical practice.
6. Consider the objective and subjective assessments that are recommended to evaluate clinical progress in an integrative approach in developmental trauma.
7. Discuss how to integrate elements from body-psychotherapy like touch, breathing and movement with neurofeedback and its synergetic effect to clients who suffered developmental trauma.
8. Integrate neurofeedback with other treatment modalities to improve client level of functioning.

**Pre-Conference Workshop 6: Social Conditions and Restorative Justice**

**CE:**

**Presenters:**
Licia Sky, Tarana Burke, Donna Hicks, PhD, Kimbell DiCero, PsyD, James Hopper, PhD, Melissa Freeman & Red Stage Stories; Ali Smith & members of the Holistic Health Foundation

**Description:**
This pre-conference workshop will bring together various voices from the field to explore the intersections of social justice, trauma, and mental health. We will examine how as clinicians, researchers, educators and healers working with trauma-impacted individuals and communities we must consider the socio-political context in which trauma occurs, as well as the ways in which institutions and systems of oppression continue to perpetuate trauma and create barriers to healing. Join us in exploring, from a social justice framework, how we define and understand trauma, how these definitions and understandings dictate how, who, and where we treat, and how we collectively can work towards personal, interpersonal, and systemic healing and change.

In this day-long workshop, hear from individuals and groups in the field who are changing the way we see, understand, and treat trauma. Licia Sky, Secretary of the Trauma Research Foundation, will moderate this critically important day, which will begin with an embodied experience of stepping into a different way of seeing and knowing this work, led by Trauma Center Fellows, Mariah Rooney O’Brien and Dominique Malebranche. Innovators from the field will lead us throughout the day: Ali Smith of the Holistic Life Foundation will present on bringing mindfulness and yoga to the public schools of Baltimore; Kimbell DiCero on bringing adolescent parents into attachment repairing Small Circles; Donna Hicks addressing the power of dignity in political and social negotiations; Jim Hopper on addressing restorative justice in cases of sexual violence; and Melissa Nussbaum and the Red Stage Stories Troupe demonstrating how Playback Theater brings social healing theater to communities.

**Outline:**
8-8:30 AM Registration
8:30 AM Morning Program

- Socio-political context of trauma
- Impact of community violence
- Structural oppression
- Mindfulness and yoga in schools

15 Minute Morning Break

- Adolescent parents and attachment
- Power of dignity in political and social negotiations

12:30—2 PM Lunch (on your own)
2 PM Afternoon Program

- Restorative justice
- Cases of sexual violence

15 Minute Afternoon Break

- Playback theater
- Questions/comments

5:15 PM Pre-Conference Workshop Ends

**Objectives:**
1. Evaluate the roles that patriarchy and sexism play in thwarting the healing that restorative justice could bring to their clients and the need to engage in and support activism to change culture and promote healing.
2. Analyze the occurrence and impact of chronic adversity for young adults who grew up amidst poverty and community violence.
3. Evaluate the opportunities and difficulties when applying hands-on work with traumatized inner city youth kids.
4. Examine the clinical impact of providing psychoeducation on trauma to clients to enhance their coping skills.
5. Analyze how community violence and structural oppression might lead to development of PTSD symptoms.
6. Teach clients how to integrate creative therapeutic interventions into their daily lives to alleviate symptoms and improve level of functioning.
7. Recognize the relationship between brain, nervous system, and body, and how yoga and mindfulness can support learning.
8. Explore how Playback Theater improves social healing in communities to inform the clinician’s choice of treatment interventions.

Pre-Conference Workshop 7: Expressive Arts as Healing Engagement: Deepening the Therapeutic Experience

CE: YES
Description:
Expressive arts not only cultivate the healing powers of imagination, they also mobilize the social engagement system through play, improvisation, musicality, movement, and creativity. When integrated into therapy, they can revitalize and energize clients, helping them to engage more fully in the present while deepening implicit and meaningful sensory-based communications. In this hands-on workshop, you’ll experience how to “get past talk” with creative, action-oriented methods, including: 1) Arts-based approaches to enhance and deepen empathy, compassion, and interpersonal connection in our clients and ourselves, 2) A brain-wise, bottom-up model for applying the expressive arts to facilitate the body’s natural resources for transformation and healing. 3) Improvisation, dramatic enactment, gesture, bilateral movement, art making, and play as foundational practices to facilitate social engagement.

Outline:

8-8:30 AM Registration
8:30 AM Morning Program
- What are expressive arts?
- Arts-based interventions
- Trauma-informed expressive arts

15 Minute Morning Break
- Support safety and self-regulation

12:30—2 PM Lunch (on your own)
2 PM Afternoon Program
- Expressive therapies continuum
- Neurobiology research

15 Minute Afternoon Break
- Sensory-based arts interventions
- Improvisation
- Dramatic enactment
- Bilateral movement
- Play
- Questions/comments

5:15 PM Pre-Conference Workshop Ends

Objectives:
1. Demonstrate arts-based approaches to enhance and deepen empathy, compassion, and interpersonal connection in our clients and ourselves.
2. Assess a bottom-up model for applying the expressive arts to facilitate the body’s natural resources for transformation and healing in clients.
3. Incorporate improvisation, dramatic enactment, gesture, bilateral movement, art making, and play as foundational practices to facilitate social engagement in a clinical setting.
4. Explore meaningful sensory-based communications to facilitate client engagement and improve treatment outcomes.
5. Apply at least three ways to support safety and self-regulation through art-based experiences in counseling settings.
6. Establish action-oriented methods that “get past talk” to help clients co-regulate with others.
7. Examine five arts-based methods used in culturally responsive, trauma-informed interventions.
8. Utilize play, improvisation, musicality, and movement in a clinical setting.

**Friday, May 31st, 2019**

**Outline:**

8:00 – 8:30 am  Registration

8:30 – 8:45am  Three Decades of Explorations in Trauma: Welcome & Introduction

8:45 – 9:45am  A Neurodevelopmental Model of Treatment Intervention

9:45 – 10:45am  Me Too: At the Intersection of Sexual Violence and Racial Justice— A Fireside Chat with Tarana Burke

10:45 – 11:05 am  Coffee Break
Expanded Outline:

8:30 – 8:45am
**Three Decades of Explorations in Trauma: Welcome & Introduction**
CE: YES
Presenter: Bessel A. van der Kolk, MD
Objective:
1. Present an overview of the impact of trauma on the various parts of the brain, body and nervous system.

8:45 – 9:45am
**A Neurodevelopmental Model of Treatment Intervention**
CE: YES
Presenters: Bruce Perry MD, PhD
Objective:
1. Illustrate clinical problem-solving through the lens of the Neurosequential Model of Therapeutics.

Reference:

9:45 – 10:45am
**Me Too: At the Intersection of Sexual Violence and Racial Justice— A Fireside Chat with Tarana Burke**
CE: NO
Presenters: Tarana Burke

11:05 am – 12:05pm
**Psychiatry Under the Influence: Institutional Corruption, Social Injury and Prescriptions for Reform**
CE: NO
Presenter: Robert Whitaker
1:15 – 1:45pm
Chair Yoga (optional)
CE: NO

1:45 – 2:45 pm
Key Interaction Patterns Between Mothers and Infants, Videotaped Illustrations: Implications for Long Term Adaptation and Clinical Interventions
CE: YES
Presenter: Beatrice Beebe, PhD
Objective:
1. Explore the patterns of mother-infant communication and its long-term clinical implications.

Reference:

3-5 pm – Friday Afternoon Workshops:

**Workshop 1: Revisiting the Treatment of Schizophrenia: Can Voices be Best Understood as Parts and Effectively Treated with Internal Family Systems Therapy?**
CE: YES
Richard C. Schwartz, PhD
Objectives:
1. Adapt the IFS model into your clinical practice and accelerate healing for clients with PTSD.
2. Identify, specify and clarify the protective parts of clients with trauma histories to help with assessment and treatment planning.

References:

**Workshop 2: How Body Experience Impacts and Alters the Sense of Self: Neuroscience Research Meets Experiential Inquiry and Revisiting the “Corrective Emotional Experience”: Creating Deep Imprints of Safety and Resonance Using Psychodramatic Techniques**
CE: YES
Bessel van der Kolk, MD, Wendy ‘d Andrea, PhD, Ruth Lanius, MD, PhD, & Licia Sky
Objectives:
1. Describe the effects of chronic early life trauma on psychopathology, attachment, and the self.
2. Discuss the five dimensions of consciousness (time, thought, body, emotion, intersubjectivity) that are often affected by trauma-related psychopathology.

References:

Workshop 3: Attachment and Trauma Therapy in Japan: A Multicultural Perspective
CE: YES
Terry Levy, PhD, Sumiko Hennessy, PhD, Akemi Sakakibara, PhD, & Kenichi Shimada, MA

Objectives:
1. Articulate cultural issues in providing training and treatment with Japanese mental health professionals and families.
2. Explain how training and treatment concepts and practices are resulting in positive changes in Japanese child welfare system policies.

References:

Workshop 4: Consultation and Follow-Up
CE: YES
Bruce Perry, MD, PhD

Objectives:
3. Demonstrate the application of the NMT assessment process including an examination of past and current experience and functioning in order to estimate the timing and severity of developmental risk that may have influenced brain development in clients.

4. Articulate the NMT “mapping” process which helps identify various areas in the brain that appear to have functional or developmental problems in order to help guide the selection and sequencing of developmentally sensitive interventions as it relates to clinical practice.

References:

**Workshop 5: Video feedback therapy for a traumatized adult patient who does not look**

CE: YES
Beatrice Beebe, PhD

Objectives:
1. Evaluate the potential role of video for traumatized patients who cannot look directly into the face of another person.
2. Articulate how a video feedback therapy can facilitate an understanding of both verbal and nonverbal communication in an adult treatment.
