Few things in health care have such a direct impact on patient care as pathophysiology – the "whys" of what happens during disease and what we must do to treat it. If you know your pathophysiology, you can provide an accurate, speedy assessment and treatment for your patient. Understanding the "whys" behind these events enables us, as health care practitioners, to best assess the patient and intervene in a timely and effective manner. By the end of the day, you'll have a thorough understanding of these principles and will know how and when to properly apply them.

Angelica F. Dizon, MD, BSN, MBA-HCM, RN, is a doctor of medicine and registered nurse, with two decades of experience in clinical practice and academic teaching, predominantly in the hospital setting. Angelica has been well regarded for her past work in medical surgical and critical care, and has also gained experiences working in home health care and skilled nursing. More recently, she served as the director of clinical services in one of the leading health care agencies in Maryland.

Her diverse experiences have provided her with a unique understanding of the importance of having an in-depth understanding of pathophysiology to facilitate the highest level of disease management and patient care. Angelica excels at putting complex topics into “plain English”. This skill, combined with her vast medical and nursing experiences, ensures a highly informative and enjoyable day – for an interdisciplinary audience.
